

# Alternating Bit Protocol (ABP) - Data types

Constructor	Meaning
<code>init : -&gt; Sys</code>	Initial state
<code>rec1 : Sys -&gt; Sys</code>	Sender receives bits
<code>rec2 : Sys -&gt; Sys</code>	Receiver receives pairs of bits & packets
<code>send1 : Sys -&gt; Sys</code>	Sender sends pairs of bits & packets
<code>send2 : Sys -&gt; Sys</code>	Receiver sends bits
<code>drop1 : Sys -&gt; Sys</code>	Dropping one element of channel1
<code>drop2 : Sys -&gt; Sys</code>	Dropping one element of channel2

Observer	Meaning
<code>channel1 : Sys -&gt; Channel1</code>	Sender-to-Receiver channel
<code>channel2 : Sys -&gt; Channel2</code>	Receiver-to-Sender channel
<code>bit1 : Sys -&gt; Bit</code>	Sender's bit
<code>bit2 : Sys -&gt; Bit</code>	Receiver's bit
<code>next : Sys -&gt; Nat</code>	Number of packet sent by Sender
<code>list : Sys -&gt; List</code>	Lists of packets received by Receiver
